Medium and Low Pressure Fire Pumps are essential components of firefighting equipment, designed to deliver water at specified pressure ranges for effective firefighting operations. According to standard regulations, low pressure fire pumps have a rated pressure not exceeding 1.6 MPa, while medium pressure fire pumps have a rated pressure between 1.8 MPa and 3.0 MPa. These pumps are engineered to provide reliable and consistent water flow necessary for extinguishing fires efficiently. Typically installed on fire trucks, they are built to withstand the demanding conditions of firefighting, including continuous operation and exposure to harsh environments. Equipped with features such as automatic pressure control, durable construction, and easy maintenance, medium and low pressure fire pumps ensure optimal performance during emergency situations, playing a crucial role in fire suppression and rescue missions.
