According to our (Global Info Research) latest study, the global Medium and Low Voltage Cables market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Medium electrical voltage cables typically refer to cables ranging between 1kV and 35kV. Cables within this range are mainly used for power transmission in urban power grids, industrial enterprises, and some larger commercial buildings. Medium voltage cables can meet the transmission needs of higher power demands, and compared to high voltage cables, they offer greater safety, making them more suitable for use in densely populated or densely built-up areas.

Low voltage electrical cable is for power transmission and distribution in the 0.6-1KV voltage circuit in IEC standards. The characteristics of low-voltage cables include relatively weak transmission capacity, low cost, and high safety. Cables within this range are mainly used in construction, industrial equipment, household appliances, communication circuits, and other fields to transmit electrical energy to various electrical devices.

On one hand, the upstream of the medium and low-voltage cable industry primarily involves raw material supply, while the midstream focuses on the manufacturing of cable products. The downstream encompasses consumer markets such as household

appliances, instrumentation, electric tools, and other sectors. The demand from downstream industries directly impacts the development of the medium and low-voltage cable industry.

On the other hand, as a critical link in power transmission and distribution, the development of medium and low-voltage cables is closely related to national infrastructure construction, the power industry, and the new energy industry. With the acceleration of urbanization, the construction of smart grids, and the development of new energy resources, the market demand for medium and low-voltage cables continues to grow. Especially in the field of new energy, such as wind power and solar energy, medium and low-voltage cables, as important carriers of electric energy transmission, have seen explosive growth in demand.
