## Abstracts

The global Medium and Low Voltage Photoelectric Composite Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Medium and low-voltage photoelectric composite cable is a new type of special optical cable that combines optical fiber and low-voltage power line in the same cable. It can be used as a transmission line in broadband access network systems, and at the same time solve the problems of data transmission and equipment power supply. Medium and low voltage photoelectric composite cables have the following characteristics: High speed: Optical fiber can provide high-speed data transmission to meet the needs of broadband access. Long-distance: Low-voltage power lines can provide long-distance PoE power supply to solve the problem of equipment power consumption. Low cost: One cable can implement fiber-to-the-home and PoE-to-the-home, saving wiring and management costs. High reliability: Both optical fiber and low-voltage power line have good anti-interference performance to ensure stable signal transmission.
