Abstracts

The global Medium Voltage XLPE Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Medium voltage cross-linked cable is a type of power cable used in medium voltage applications. Medium voltage cables generally refer to cables with a rated voltage between 1kV and 35kV. Medium voltage cross-linked cables consist of multiple insulated conductors, each of which is wrapped by insulating material and then by an outer sheath. The insulating material is usually cross-linked polyethylene (XLPE). Medium-voltage XLPE cables have the following characteristics: 1. High withstand voltage: medium-voltage XLPE cables can withstand higher voltages, usually between 1kV and 35kV. 2. Good electrical performance: medium voltage cross-linked cables have low resistance and capacitance and can provide good electrical performance. 3. Heat resistance: The insulating material of the medium-voltage XLPE cable has high heat resistance and can work normally in a high temperature environment. 4. Chemical corrosion resistance: The insulation material and outer sheath of medium voltage XLPE cables have strong chemical corrosion resistance and can be used in various chemical environments. 5. Safe and reliable: Medium-voltage XLPE cables meet the safety requirements of international and domestic standards and can provide reliable electrical connections. Medium-voltage cross-linked cables are widely used in power systems, industrial fields, internal wiring of buildings, etc., for the transmission and distribution of electrical energy. According to different application requirements, medium voltage XLPE cables can choose different specifications, materials and structures.
