According to our (Global Info Research) latest study, the global Meeting Recording Software market size was valued at US\$ 1236 million in 2025 and is forecast to a readjusted size of US\$ 1991 million by 2032 with a CAGR of 7.1% during review period.

Meeting recording software is an intelligent tool specifically designed for automating the capture, transcription, organization, and distribution of meeting content. By integrating speech recognition, natural language processing, and cloud computing technologies, it converts meeting audio into editable and searchable text records in real time. This software typically features core functions such as speaker recognition, timestamp marking, key summary generation, to-do list extraction, and multi-format export, and supports seamless integration with video conferencing platforms. It aims to replace the inefficient traditional manual recording method, ensuring complete retention of meeting information, traceability of decisions, and allowing participants to focus on the discussion itself. It is widely used in enterprise offices, remote collaboration, and education and training scenarios.

With the deep integration of generative AI and large-scale language models, meeting recording software is rapidly evolving from passive transcription to proactive intelligent assistants. In the future, the software will achieve personalized minutes tailored to each participant's role, automatically extracting points of interest and generating actionable steps that can be linked to project management tools. The trend towards hardware and software integration is evident, with AI-powered recording hardware combined with cloud-based software enabling far-field audio pickup and seamless recording, comprehensively capturing offline meeting data. Simultaneously, the integration of sentiment analysis, real-time translation, and digital twin technologies will make meeting

minutes a core entry point for enterprise knowledge bases, driving the intelligent transformation of organizational decision-making from experience-driven to data-driven.
