Abstracts

According to our (Global Info Research) latest study, the global Megawatt-Scale AEM Electrolyser market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Megawatt-Scale Anion Exchange Membrane (AEM) electrolyzer offers several significant benefits, especially in the context of green hydrogen production and renewable energy integration.

AEM electrolyzers use non-precious metal catalysts (such as nickel or iron) instead of the expensive platinum group metals (PGMs) used in Proton Exchange Membrane (PEM) electrolyzers. This reduces the overall cost, making it more economically feasible to scale up production.
