## Abstracts

The global Melamine Cleaning Compounds market size is expected to reach \$ 72.59 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Melamine Cleaning Compound is a high-performance mold-cleaning material based on melamine-formaldehyde (MF) resin. In semiconductor encapsulation, it utilizes strong physical shrinkage and chemical adsorption generated during the curing process to effectively peel off stubborn carbonized residues, oxides, and lingering molding compounds from the mold cavities. With higher hardness than standard rubber cleaning sheets, it excels at heavy-duty maintenance and is primarily used for deep cleaning and restoring the mold's surface integrity. In 2025, global Melamine Cleaning Compound production reached approximately 10 million units.

This report studies the global Melamine Cleaning Compounds production, demand, key manufacturers, and key regions.
