## Abstracts

Melamine fiber is a heat-resistant and flame-retardant synthetic fiber made of melamine-formaldehyde resin, and a synthetic fiber in which the fiber forming substance is a synthetic polymer composed of at least 50% by weight of cross-linked melamine polymer. Melamine fiber is a cost-effective, heat-resistant fiber based on melamine chemicals, with a continuous working temperature of 400°F (200°C). Melamine fiber is most preferably blended with another synthetic filament to achieve the desired yarn properties

Melamine fibers have important properties such as flame retardancy, excellent thermal/dimensional stability and self-extinguishing properties. This characteristic makes melamine fiber an ideal choice for flame-retardant clothing. The typical fiber length is in the range of 1-12mm, and it shows excellent dispersibility and formability in the wet-laid process. Melamine fibers are processed with standard textile equipment and sometimes mixed with commercial fibers and other heat-resistant synthetic fibers (such as aramid fibers).

According to our (Global Info Research) latest study, the global Melamine Fiber market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
