Melamine foam is a soft material with a foam-like texture that is made out of a formaldehyde-melamine-sodium bisulfate copolymer. In simpler words, it is a thermosetting material made with the same melamine resin that can be found in boards and dishware.

Scope of the Report:

This report focuses on the Melamine Foam in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The Global Melamine Foam Market Research Report 2017 is a professional and in-depth study on the current state of the Melamine Foam market. Annual estimates and forecasts are provided for the period 2017 through 2022. Also, a six-year historic analysis is provided for these markets. During the past few years, the global consumption of Melamine Foam increases by 3837 K m³ in 2017 from 1866 K m³ in 2012 to, with an average growth rate of more than 15.51%. The whole market value is about 796.56 million USD in 2017.

Regionally, Asia-Pacific is the biggest Consumption area of Melamine Foam in the world and china is the most potential market with the fastest growing rate of 14.30%

From the view of application market, 38.69% is the most active and potential field because of the widely use of Construction. Although there is big difference between big companies such as BASF with new companies, especially in the price of products, customers still willing to pay more money to achieve products or service with higher

quality. Therefore, it will become harder and harder for a new company which doesn't have its own core technology and R&D team to survive in this Technology-intensive battle.

As a new kind of polymeric foam materials, the Consumption process will become mature gradually with more and more companies enter this field. As two key parameters, density and Temperature range play vital role in the quality system of melamine foam. Cause formaldehyde will do harm to the environment, it is urgent to develop one kind of alternative raw materials.

For price trend analysis, a key variable in the performance of Melamine Foam producers is raw material urea and formaldehyde, specifically the speed at which any increase can be passed through to customers.

For next few years, the global Melamine Foam revenue would keep increasing with annual growth rate with 9.32%, global Consumption capacity melamine foam is 7155 K m³ in 2022. With the development of technology and decline of Consumption cost, the price of melamine foam will keep declining, and the profit margin will decline too. This is the end of Melamine Foam report.

The worldwide market for Melamine Foam is expected to grow at a CAGR of roughly 9.3% over the next five years, will reach 1360 million US\$ in 2023, from 800 million US\$ in 2017, according to a new GIR (Global Info Research) study.
