According to our (Global Info Research) latest study, the global Melamine-Modified Urea Formaldehyde Resin market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Melamine Urea Formaldehyde Resins are poly-condensation products of the reaction of formaldehyde with urea and melamine. These resins have higher water and weather resistance and therefore are suitable for the production of panels for exterior use or in conditions of high humidity. These resins provide panels with superior properties and this compensates their relatively higher raw material cost. These resins are the most commonly used adhesives for the production of construction materials.
