Abstracts

The global Melt Flow Indexers market size is expected to reach \$ 207 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

Melt Flow Indexers, also known as melt flow testers, MFI testers or extrusion plastometers, are laboratory testing instruments used to determine the melt mass-flow rate (MFR) and melt volume-flow rate (MVR) of thermoplastic materials under specified temperature and load conditions. They are widely used in quality control, incoming material inspection, polymer R&D, compounding, recycling and resin production, especially for polyethylene, polypropylene, ABS, PC, PA and other thermoplastics. In 2025, Global Melt Flow Indexers sales are estimated at about 18 K Units, with an average ex-works price of around 7,000 US\$/Unit.

The melt flow indexer value chain includes upstream temperature-control systems, heating barrels, pressure or displacement sensors, stepper motors, weights, cutting units, controllers and testing software; midstream laboratory testing instrument manufacturers; and downstream users such as resin producers, compounders, packaging material companies, automotive plastics suppliers, appliance manufacturers, testing laboratories, universities and polymer R&D centers.

The melt flow indexer market is mainly driven by polymer quality control, compound formulation development, recycled plastic grading and standardized testing requirements. As lightweight automotive plastics, upgraded packaging materials, engineering plastics and recycled polymers expand, resin suppliers and plastic processors need MFR/MVR data to evaluate material flowability, processing stability and batch consistency. Automation features such as automatic loading, cutting, cleaning and data connectivity are also encouraging replacement of older manual

instruments, especially in resin plants, third-party laboratories and high-throughput testing environments.

This report studies the global Melt Flow Indexers production, demand, key manufacturers, and key regions.
