According to our (Global Info Research) latest study, the global Membrane Deaerator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Membrane Deaerator, means that membrane degassing is the ideal solution for the quantitative removal of oxygen and carbon dioxide at ambient temperatures. In the membrane degassing process, water is passed through a semi-permeable membrane in contact with the purified gas stream. At temperatures below 45° F, membrane technology is a highly efficient method of removing oxygen from water, outperforming conventional vacuum degassing. Membrane contactors are capable of removing or adding gas to the fluid.
