Abstracts

The global Membrane Oxygenator market size is expected to reach \$ 517.8 million by 2029, rising at a market growth of 7.1% CAGR during the forecast period (2023-2029).

Global key players of membrane oxygenator include Medtronic, LivaNova, Terumo, etc. The top three players hold a share about 67%. In terms of product type, hollow fibre membrane oxygenator is the largest segment, occupied for a share of 79%, and in terms of application, respiratory has a share about 53 percent.

A membrane oxygenator is a device used to add oxygen to, and remove carbon dioxide from the blood. It can be used in two principal modes: to imitate the function of the lungs in cardiopulmonary bypass (CPB), and to oxygenate blood in longer term life support, termed extracorporeal membrane oxygenation, ECMO. A membrane oxygenator consists of a thin gas permeable membrane separating the blood and gas flows in the CPB circuit; oxygen diffuses from the gas side into the blood, and carbon dioxide diffuses from the blood into the gas for disposal.

This report studies the global Membrane Oxygenator production, demand, key manufacturers, and key regions.
