## Abstracts

The global Memory Card for Dash Cam market size is expected to reach \$ 642.3 million by 2029, rising at a market growth of 2.2% CAGR during the forecast period (2023-2029).

The development trend for memory cards used in dash cams is focused on increasing storage capacity, improving read and write speeds, and enhancing durability. As dash cams record high-definition videos, the need for larger storage capacities is increasing. Memory cards with capacities ranging from 64GB to 512GB are becoming more common, allowing users to store more footage without the need for frequent file transfers or deletions. Dash cams require memory cards with fast read and write speeds to ensure smooth and uninterrupted recording. UHS-II (Ultra High-Speed Phase II) and V30 (Video Speed Class 30) speed ratings are becoming more prevalent, providing faster data transfer rates and better performance for dash cam applications. Dash cams often operate in extreme temperature conditions and are subject to continuous read and write cycles. Memory cards designed specifically for dash cams are being developed with enhanced endurance and reliability features, such as high-temperature resistance, shock resistance, and extended lifespan.

This report studies the global Memory Card for Dash Cam production, demand, key manufacturers, and key regions.
