Abstracts

Memory implants are useful in controlling the voluntary actions of the brain in people who suffer from brain damage due to stroke, Alzheimer's, and disruption of neural network. The memory implant market plays a key role in the overall neurological research industry. A number of researchers are working on developing remarkable memory implants that can perform various functions including pain management and controlling of heart beats, and controlling symptoms of Parkinson's disease, sleep apnea, and various neurology diseases. Though, advanced technology in the healthcare industry might have succeeded in bringing down the mortality rate, there is still dearth of treatments and drugs to help eradicate neurological diseases associated with older population.
