According to our (Global Info Research) latest study, the global MEMS Contactless Thermal Sensor market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The MEMS contactless thermal sensor is a temperature sensor based on this MEMS technology. The thermopile element receives radiant heat energy from the object to be measured, and the surface temperature of the object can be measured in a non-contact manner.

MEMS (Micro Electro Mechanical System) is an ultra-compact system that incorporates mechanical components, sensors, actuators, and electronic circuits on a single substrate and is manufactured by applying semiconductor microfabrication technology. While LSI integrates electronic circuits on a flat surface, MEMS integrates mechanical mechanisms in addition to electronic circuits on a wafer to form a three-dimensional shape or movable structure of a wafer.
