Abstracts

According to our (Global Info Research) latest study, the global MEMS Fans market size was valued at US\$ 9.90 million in 2025 and is forecast to a readjusted size of US\$ 66.27 million by 2032 with a CAGR of 26.6% during review period.

MEMS Fan is a miniature active cooling device based on micro-electro-mechanical systems (MEMS) technology, designed to generate airflow through vibrating membranes, piezoelectric actuators, microvalves, or micro blowers rather than using traditional rotating blades. Compared with conventional fans, MEMS fans are significantly thinner, quieter, lighter, and more energy-efficient, making them suitable for smartphones, laptops, SSDs, optical modules, AI servers, AR/VR devices, automotive electronics, and other compact high-heat-density applications. As electronic devices continue to become thinner and more powerful, MEMS fans are increasingly viewed as an important next-generation thermal management solution. In 2025, global MEMS Fans production reached approximately 275 k units, with an average global market price of around 35 USD/unit. The production capacity for MEMS Fans in 2025 was approximately 300 k units. The typical gross profit margin for MEMS Fans between 20% and 40%.
