The global MEMS Gyroscopes market size is expected to reach \$ 762.6 million by 2029, rising at a market growth of 3.8% CAGR during the forecast period (2023-2029).

Global key players of MEMS gyroscopes include Bosch, STMicroelectronics, TDK, Analog Devices, Murata, etc. The top five players hold a share over 70%. Asia-Pacific is the largest market, has a share about 45%, followed by Europe, and North America, with share 26% and 23%, separately. Europe is the largest producer, has a share about 35%, followed by Japan, with share 24%.

A MEMS (micro-electromechanical system) gyroscope is a small sensor device that measures angular velocity or rotational motion. It works on the principle of Coriolis force, which is the apparent force that acts on an object moving in a rotating reference frame. When a MEMS gyroscope is rotated, the Coriolis force causes a vibrating mass to move in a perpendicular direction to the rotation axis, producing an electrical signal that can be used to measure the angular velocity.
