According to our (Global Info Research) latest study, the global MEMS Pressure Sensors market size was valued at USD 1856 million in 2023 and is forecast to a readjusted size of USD 2383.3 million by 2030 with a CAGR of 3.6% during review period.

Microelectromechanical systems (MEMS) devices combine small mechanical and electronic components on a silicon chip. The fabrication techniques used for creating transistors, interconnect and other components on an integrated circuit (IC) can also be used to construct mechanical components such as springs, deformable membranes, vibrating structures, valves, gears and levers. This technology can be used to make a variety of sensors including several types of pressure sensor. It enables the combination of accurate sensors, powerful processing and wireless communication (for example, Wi-Fi or Bluetooth) on a single IC.
