Abstracts

MEMS (Micro-Electro-Mechanical Systems) silicon crystal oscillator is a miniature electromechanical system used to generate stable clock signals or frequency references. They are based on micro-nano processing technology, which integrates micro-mechanical structures onto a silicon wafer, usually a silicon substrate. MEMS silicon crystal oscillators usually consist of micro oscillators, circuits and frequency control circuits. Compared with traditional quartz crystal oscillators, MEMS silicon crystal oscillators have smaller size, lower power consumption and better shock resistance. They can be used in a variety of applications such as mobile devices, wireless communications, computers, industrial automation, and more. The development of MEMS silicon crystal oscillators makes various portable electronic devices more compact, energy-saving, and has better stability and reliability in some special environments.

According to our (Global Info Research) latest study, the global MEMS Silicon Crystal Oscillator market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
