Abstracts

Meningococcal disease is a severe infection of meninges, the thin layers of tissue covering brain and spinal cord, caused by the bacteria *Neisseria meningitidis*. This bacteria can also cause bloodstream infections (septicemia). Bacterial meningitis is severe because of rapid onset and a significant risk of death associated with infection. Infection of *Neisseria meningitidis* may also result in mental retardation, deafness and epilepsy. 12 strains of *N. meningitidis* have been identified, 6 of which (A, B, C, W, X and Y) are capable enough to cause epidemics. Meningococcal septicaemia is a rare but fatal form of meningococcal disease characterized by a haemorrhagic rash and rapid circulatory collapse.
