Abstracts

The global Meniscal Surgical Implant market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The meniscus surgery implant is used to fill meniscal defects that result from partial meniscectomy. The meniscus surgery implant is inserted into a patient's knee through a small incision (two to three inches). Because of its special design, featuring a thick rim and a thinner center, the device stays in place – even when squatting – without being attached to bones or any other surrounding tissue.

This report studies the global Meniscal Surgical Implant production, demand, key manufacturers, and key regions.
