## Abstracts

Menstrual Cups is type of feminine hygiene product which is usually made of medical grade silicone, shaped like a bell and is flexible. It is worn inside the vagina during menstruation to catch menstrual fluid (blood), and can be worn during the day and overnight. Full Menstrual Cups are removed from the vagina, emptied into the toilet or sink, washed and re-inserted (washing hands with soap before doing so is crucial).

At the end of the monthly period, the cup can be sterilized, usually by boiling in water. Unlike tampons and pads, the cup collects menstrual fluid rather than absorbing it.

Manufacturers have different recommendations for when to replace the cups, but in general they can be reused for five years or so. Disposable Menstrual Cups are also available – these work in the same way as a regular Menstrual Cups except they are disposed of after every use or (for some brands) after every cycle.
