According to our (Global Info Research) latest study, the global Mental Health Chatbots market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Mental health chatbots are a type of Artificial Intelligence (AI) that are designed to help you with your mental health. You can access their online services through websites or mobile apps, usually for a small subscription fee. You type your questions and comments into a text box (like you would in any messaging app) and the 'bot' responds to you almost immediately. They aim to do a similar job as a therapist or coach, but they're not immediately operated by humans. While the advice they give is backed by science, it'll be a computer responding to you. It's usually in the form of a friendly character to make it easier to connect with. Mental health chatbots can help with a variety of mental health issues, including mild anxiety, depression, stress, and addiction. If you're struggling with any of these issues, a mental health chatbot could be a helpful tool for you. They can help you develop emotional wellbeing and coping strategies in the face of stressful situations. In this way, they can act as a coach, encouraging you to step outside your comfort zone or build helpful habits over time.
