Abstracts

The global Mental Health Chatbots market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Mental health chatbots are a type of Artificial Intelligence (AI) that are designed to help you with your mental health. You can access their online services through websites or mobile apps, usually for a small subscription fee. You type your questions and comments into a text box (like you would in any messaging app) and the 'bot' responds to you almost immediately. They aim to do a similar job as a therapist or coach, but they're not immediately operated by humans. While the advice they give is backed by science, it'll be a computer responding to you. It's usually in the form of a friendly character to make it easier to connect with. Mental health chatbots can help with a variety of mental health issues, including mild anxiety, depression, stress, and addiction. If you're struggling with any of these issues, a mental health chatbot could be a helpful tool for you. They can help you develop emotional wellbeing and coping strategies in the face of stressful situations. In this way, they can act as a coach, encouraging you to step outside your comfort zone or build helpful habits over time.

This report studies the global Mental Health Chatbots demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Mental Health Chatbots, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2023 as the base year. This report explores demand trends and competition, as well as details the characteristics of Mental Health Chatbots that contribute to its increasing demand across many markets.
