According to our (Global Info Research) latest study, the global MEP Engineering and Design Service market size was valued at US\$ 1208 million in 2024 and is forecast to a readjusted size of USD 1552 million by 2031 with a CAGR of 4.0% during review period.

MEP engineering and design service refers to the comprehensive engineering design and service provided by professional teams, covering the three major systems of Mechanical, Electrical, and Plumbing (MEP). In fields such as construction, industry, and facility management, this service is crucial. It involves the planning and design of building internal heating, ventilation, and air conditioning (HVAC) systems, the layout of electrical systems such as lighting, power distribution, and security systems, as well as the design and installation of piping systems for water supply and drainage, fire sprinklers, and gas supply. MEP engineers utilize their professional knowledge to ensure the efficient operation, energy conservation, environmental protection, and coordination of all systems to meet the functional needs, safety standards, and regulatory requirements of buildings. Services include but are not limited to preliminary design, construction drawing preparation, system selection and optimization, field guidance and supervision, debugging and acceptance. By adopting advanced design software and three-dimensional modeling technology, MEP engineering and design services can improve design efficiency, reduce conflicts and changes during construction, ensure that projects are completed on time and up to quality standards, and create greater value for clients.
