Abstracts

According to our (Global Info Research) latest study, the global Meridional Accelerated Axial Flow Fan market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Meridional Accelerated Axial Flow Fan consists of air duct, motor, wind blade and wind wheel. The air duct has a wind wheel and wind blade, and the wind wheel is connected with the output shaft of the motor. The shape of the air duct is a tubular body, and the shape of the wind wheel is an enlarged cone cylinder which can increase the contact area between the wind blade and the air flow. The rear end of the air duct is fixedly connected with the guide cylinder, which is composed of an outer cylinder, an inner cylinder and a guide vane. The inner cylinder is a reduced inner empty cone cylinder, and the front end of the inner cylinder is provided with a sealing plate, which is used to reduce the gas flow leakage and increase the fan pressure. 13 radial guide blades are distributed between the inner and outer cylinders, and the section of the guide blade is the airfoil. The inner cylinder is fixedly connected with the motor through a T-shaped bracket. When the air flows through the rotating impeller, the double pressurization, the pressure increases, the fan efficiency improves, the air flows through the diversion cylinder, the flow direction turns to axial, the gas velocity decreases, the wind pressure increases, and the fan efficiency is improved.
