According to our (Global Info Research) latest study, the global Mesh App and Service Architecture market size was valued at US\$ 4790 million in 2024 and is forecast to a readjusted size of USD 6942 million by 2031 with a CAGR of 5.5% during review period.

The “Mesh App and Service Architecture” (MASA) refers to the design of solutions that link, mobile apps, web apps, desktop apps and IoT apps – and their data, whether user or operational - into a broad mesh of back-end services to create what users view as the 'Application.'

The global mesh app and service architecture (MASA) market refers to the market for software architectures that enable the development and delivery of decentralized, modular, and scalable applications and services. MASA offers a flexible and agile approach to application development, allowing organizations to quickly adapt and scale their software solutions based on business needs.

Key factors driving the growth of the global MASA market include:

Increasing adoption of cloud computing: With the widespread adoption of cloud computing, organizations are looking for software architectures that can effectively leverage cloud resources and enable distributed computing. MASA provides a framework to design and deploy applications that can seamlessly integrate with cloud services, making it an attractive choice for modern application development.

Growing demand for scalable and agile applications: As businesses strive to become more agile and scalable, there is a rising demand for applications that can easily adapt

to changing requirements and handle large workloads. MASA enables the development of modular and distributed applications that can be scaled horizontally, allowing organizations to quickly respond to changing market dynamics.

Leveraging microservices architecture: MASA is closely related to the microservices architectural style, which involves building applications as a collection of smaller, loosely coupled services. Microservices facilitate scalability, fault tolerance, and maintainability of applications. MASA provides the necessary infrastructure and tools to manage and orchestrate these microservices, driving the adoption of this architectural approach.

Increasing need for integration and interoperability: In today's interconnected world, organizations often need to integrate their applications with various internal and external systems. MASA offers capabilities for seamless integration and interoperability, allowing organizations to build applications that can easily communicate and exchange data with other systems, including APIs, databases, and third-party services.

Advancements in technology, such as containers and API management: MASA takes advantage of technological advancements such as containers, which enable the packaging and deployment of applications in isolated environments, and API management tools, which provide mechanisms for controlling and securing access to application interfaces. These technologies enhance the scalability, performance, and security of MASA-based applications, driving their adoption.

In conclusion, the global mesh app and service architecture market is driven by the increasing adoption of cloud computing, the demand for scalable and agile applications, the leveraging of microservices architecture, the need for integration and interoperability, and advancements in technology. As organizations seek to build flexible and scalable software solutions, MASA provides a framework to meet their evolving business needs.
