The mesh belt continuous furnace is a continuous industrial heating equipment that uses a metal mesh belt as a workpiece carrier and conveyor. It is mainly composed of a furnace body, a heating system, a mesh belt transmission system, a control system, and other parts. During operation, the metal mesh belt runs continuously to transport the workpiece to be processed from the feed end to the furnace, and passes through different temperature zones such as the preheating zone, heating zone, insulation zone, and cooling zone in turn, so that the workpiece completes a specific heat treatment process during the continuous movement, such as quenching, tempering, annealing, carburizing, etc. The equipment has the characteristics of high production efficiency, uniform heating, and a high degree of automation, and can meet the needs of large-scale, continuous industrial production.
