Mesh structured packing is a type of high - efficiency packing material used in columns such as distillation, absorption, and extraction<sup>2</sup>. It is made of multilayer metal wire meshes, usually stainless steel, copper, aluminum, or other metal wires<sup>1</sup>. These wire meshes are precisely woven and stacked to form a regular and orderly structure<sup>2</sup>. The mesh structured packing has a large specific surface area, which can provide more contact area for the gas - liquid or liquid - liquid phases, enhancing the mass transfer and heat transfer efficiency<sup>1</sup>. Meanwhile, due to the unique capillary effect of the mesh, its surface has good wettability, which is beneficial for the uniform distribution of liquids on the packing surface<sup>1</sup>. In addition, it features a low - pressure drop, allowing fluids to flow through smoothly, and has a relatively small liquid - holdup, which is especially suitable for the separation of difficult - to - separate materials and heat - sensitive systems<sup>1</sup>.
