According to our (Global Info Research) latest study, the global Mesophase Pitch market size was valued at USD 271.6 million in 2023 and is forecast to a readjusted size of USD 292.3 million by 2030 with a CAGR of 1.1% during review period.

The mesophase of asphalt is a mixture of a variety of flat, disk-shaped, thick pahs with a relative molecular weight of 370 ~ 2000. General substances present optical anisotropy if they exist in crystal state, and optical isotropy if they exist in liquid state. However, in the intermediate stage of the transition from crystal to liquid (or the inverse process), a class of substances present an optically anisotropic turbidity fluid state, which is both liquid form and optically anisotropic. In crystallography, it is called liquid crystal; in physiography, it is called mesophase.

The market for mesophase pitch is closely linked to the aerospace, automotive, and electronics industries. Trends include developing improved pitch formulations for advanced carbon materials.
