## Abstracts

According to our (Global Info Research) latest study, the global Mesoporous Bioactive Glass market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Mesoporous bioactive glass, composed of elements such as calcium and silicon, is a new type of ordered mesoporous bioactive glass material synthesized and developed on the basis of bioactive glass materials. Compared with traditional bioactive glass, mesoporous bioactive glass is considered a better alternative material for bone tissue repair, skin surface repair, tooth repair, etc. due to its uniform nanoscale mesoporous structure and high specific surface area. After soaking in a simulated physiological solution in the human body, it can form hydroxyapatite with a surface similar to natural bone in a short period of time, which has high bioactivity and strong biodegradability. Therefore, it is considered a better alternative material for bone tissue repair, skin surface repair, tooth repair, etc.
