Abstracts

According to our (Global Info Research) latest study, the global Message Broker market size was valued at US\$ 1137 million in 2024 and is forecast to a readjusted size of USD 2152 million by 2031 with a CAGR of 9.5% during review period.

A message broker is a software component or an application that facilitates the communication and transfer of messages between different software systems, applications, or components.

Key functions and characteristics:

Message Routing

It determines where a message should be sent based on various criteria such as the message content, the sender, or the destination. For example, in an e - commerce system, a message about a new order might be routed to the inventory management system to update stock levels, to the shipping department to prepare for dispatch, and to the accounting system to handle billing.

Message Transformation

It can modify the format or content of a message to make it suitable for the receiving system. For instance, if a customer registration system sends user data in XML format, and the marketing system expects data in JSON format, the message broker can transform the XML data into JSON before forwarding it to the marketing system.

Message Queuing

When the receiving system is busy or unavailable, the message broker can store messages in a queue. Let's say an online payment gateway is temporarily down due to maintenance. The messages related to payment requests from the e - commerce website can be queued up in the message broker until the payment gateway is back online. This helps to ensure that messages are not lost and are processed in the order they were received (in most cases).

Protocol Conversion

Different systems may use different communication protocols. A message broker can handle the conversion between protocols. For example, one system might communicate using HTTP, while another uses AMQP (Advanced Message Queuing Protocol). The message broker can receive messages over HTTP and then forward them using AMQP to the appropriate destination system.

Decoupling of Systems

It allows different software systems to communicate without being tightly coupled. In a microservices architecture, for example, multiple microservices can interact through a message broker. If one microservice needs to be updated or replaced, the other microservices that communicate through the message broker are less likely to be affected, as long as the message formats and contracts remain the same.

The message broker market is in a period of rapid growth, and its core driving force comes from the rigid demand for enterprise digital transformation and real-time data processing. The message broker market is driven by the dual wheels of the Internet of Things and microservices. The surge in the number of IoT devices (expected to exceed 30 billion in 2025) has pushed message brokers to become a 'bridge' for device communication. For example, in smart home systems, thermostats, cameras and other devices interact with Kafka clusters in real time through the MQTT protocol. In addition, the widespread application of microservice architecture in finance, e-commerce, and manufacturing has made message brokers a standard for service decoupling and asynchronous communication. For example, Alipay processes more than one million transaction requests per second through Kafka to ensure the stability of the system under high concurrency.

This report is a detailed and comprehensive analysis for global Message Broker market. Both quantitative and qualitative analyses are presented by company, by region &

country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.

Key Features:

Global Message Broker market size and forecasts, in consumption value (\$ Million), 2020-2031

Global Message Broker market size and forecasts by region and country, in consumption value (\$ Million), 2020-2031

Global Message Broker market size and forecasts, by Type and by Application, in consumption value (\$ Million), 2020-2031

Global Message Broker market shares of main players, in revenue (\$ Million), 2020-2025

The Primary Objectives in This Report Are:

- To determine the size of the total market opportunity of global and key countries
- To assess the growth potential for Message Broker
- To forecast future growth in each product and end-use market
- To assess competitive factors affecting the marketplace

This report profiles key players in the global Message Broker market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Memphis.dev, VMware, Confluent, WSO2, ZeroMQ, IBM, Eclipse Mosquitto, Redis, Amazon, Fiserv, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Market segmentation

Message Broker market is split by Type and by Application. For the period 2020-2031,

the growth among segments provides accurate calculations and forecasts for Consumption Value by Type and by Application. This analysis can help you expand your business by targeting qualified niche markets.

Market segment by regions, regional analysis covers

North America (United States, Canada and Mexico)

Europe (Germany, France, UK, Russia, Italy and Rest of Europe)

Asia-Pacific (China, Japan, South Korea, India, Southeast Asia and Rest of Asia-Pacific)

South America (Brazil, Rest of South America)

Middle East & Africa (Turkey, Saudi Arabia, UAE, Rest of Middle East & Africa)

The content of the study subjects, includes a total of 13 chapters:

Chapter 1, to describe Message Broker product scope, market overview, market estimation caveats and base year.

Chapter 2, to profile the top players of Message Broker, with revenue, gross margin,

and global market share of Message Broker from 2020 to 2025.

Chapter 3, the Message Broker competitive situation, revenue, and global market share of top players are analyzed emphatically by landscape contrast.

Chapter 4 and 5, to segment the market size by Type and by Application, with consumption value and growth rate by Type, by Application, from 2020 to 2031

Chapter 6, 7, 8, 9, and 10, to break the market size data at the country level, with revenue and market share for key countries in the world, from 2020 to 2025. and Message Broker market forecast, by regions, by Type and by Application, with consumption value, from 2026 to 2031.

Chapter 11, market dynamics, drivers, restraints, trends, Porters Five Forces analysis.

Chapter 12, the key raw materials and key suppliers, and industry chain of Message Broker.

Chapter 13, to describe Message Broker research findings and conclusion.
