## Abstracts

The global meta-Chloroperoxybenzoic Acid market size is expected to reach \$ 48.22 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

meta-Chloroperoxybenzoic acid (mCPBA) is an organic peroxy acid widely used as a strong oxidizing agent in organic synthesis. It is typically a white solid powder, readily soluble in organic solvents but sparingly soluble in water.

The upstream core raw materials include m-chlorobenzoic acid and high-concentration hydrogen peroxide. The purity of m-chlorobenzoic acid directly determines the final activity of the finished product.

In 2025, global sales are projected to be approximately 700 tons, with an average market price of around US\$48,500 per ton. Industry gross profit margins are expected to be between 10% and 25%.

Due to its excellent solubility in organic solvents, high reactivity under mild conditions, and outstanding stereoselectivity towards sensitive functional groups, meta-chloroperoxybenzoic acid (mCPBA) plays a crucial role in high-end pharmaceutical total synthesis. With the continuous advancement of research and development in anticancer drugs, antiviral drugs, and steroids worldwide, the increasing demand for key synthetic steps such as epoxidation and Baeyer-Villiger oxidation will create stable market growth for mCPBA.

This report studies the global meta-Chloroperoxybenzoic Acid production, demand, key manufacturers, and key regions.
