Abstracts

Metabolic syndrome is a cluster of conditions — increased blood pressure, high blood sugar, excess body fat around the waist, and abnormal cholesterol or triglyceride levels — that occur together, increasing your risk of heart disease, stroke and diabetes.

Scope of the Report:

This report studies the Metabolic Syndrome market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Metabolic Syndrome market by product type and applications/end industries.

One of the upcoming trends gaining traction in the market is the increasing focus on oral insulin therapies. Till now, insulin injections were mostly administered through subcutaneous tissues, but this route of application is associated with risk of infection and hypersensitivity reactions, emboli, high cost, and injection site pain. Also, several needle-phobic individuals hesitate to adopt this route of administration. This paved the way for extensive research in the development of oral insulin. The oral form of insulin prevents the unpleasantness of insulin injections and other complications associated with the existing therapies. Moreover, oral administration of insulin ensures increased patient comfort and compliance, reduced risk of infection, simpler application, and is cost-effective.
