## Abstracts

According to our (Global Info Research) latest study, the global Metal-air Battery market size was valued at USD 259.3 million in 2022 and is forecast to a readjusted size of USD 643.9 million by 2029 with a CAGR of 13.9% during review period.

A metal-air battery is a type of electrochemical energy storage device that utilizes a chemical reaction between a metal and oxygen from the air to generate electrical energy. It is called a metal-air battery because the anode of the battery is typically a pure metal, such as zinc, aluminum, or lithium, while the cathode is a porous material that allows air (containing oxygen) to reach the battery. Metal air battery is a kind of half energy storage and half fuel battery, which is considered as a new generation of energy storage and conversion device. Metal air battery has the advantages of good rate performance, high energy density, and low carbon sustainability. Metal-air batteries are known for their high theoretical energy densities, which means they have the potential to store more energy per unit weight compared to other types of batteries, such as lithium-ion batteries. This makes them attractive for applications that require long-lasting power, such as electric vehicles, portable electronics, and grid-scale energy storage.

In the global market, the core manufacturers of Metal-air Battery in the global market include GP Batteries (Gold Peak), Duracell Activair, and Maxell? ect. The top three companies within this industry hold more than 50% of the market share. North America, Europe, China, Japan, and India are the main production regions of this product, of which North America and China market each accounted for about 30% of the market share. The product can be classified as zinc air battery, aluminium air battery, lithium air battery and so on according to the material. They are widely used in electronic devices, energy storage, electric vehicles and other fields.
