Abstracts

According to our (Global Info Research) latest study, the global Metal Bellows Accumulators market size was valued at USD 910.8 million in 2023 and is forecast to a readjusted size of USD 1290.3 million by 2030 with a CAGR of 5.1% during review period.

The metal bellows accumulators function similarly to the compressed gas type, except the elastic diaphragm or floating piston is replaced by a hermetically sealed welded metal bellows. Fluid may be internal or external to the bellows.

The advantages to the metal bellows type include exceptionally low spring rate, allowing the gas charge to do all the work with little change in pressure from full to empty, and a long stroke relative to solid (empty) height, which gives maximum storage volume for a given container size.
