According to our (Global Info Research) latest study, the global Metal Beverage Packaging Can market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Metal cans are divided into two piece cans and three piece cans. The material used for the three piece can is mostly tinplate (sheet iron), while the material for the two piece can is mostly aluminum alloy plate. Due to its excellent sealing and ductility, as well as its suitability for low-temperature filling, aluminum cans are more suitable for containing beverages that generate gases, such as carbonated beverages, beer, etc. Aluminum cans are more widely used than iron cans, and almost all canned beverages you can see are packaged in aluminum cans.
