Carbides are the compounds which are composed of carbon and less electronegative element. Carbides are usually prepared from metal/ metal oxides by combining the metal with carbon at high temperatures. Metal carbide nanoparticles are used across various end-use industries, including – filtration, separation, coating materials, drug carriers, sensors, adhesives, automobiles, information and technology, micronized active particles, cosmetics, etc. Metal carbide nanoparticles have several benefits associated with them. They possess similar properties as those of metals, alloys, permanent magnets, ferromagnetic materials, etc. and exhibit good electrical conductivity and reaction kinetics.

According to our (Global Info Research) latest study, the global Metal Carbide Nanoparticles market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
