According to our (Global Info Research) latest study, the global Metal-coated Quartz Fiber Fabric market size was valued at US\$ 16.46 million in 2025 and is forecast to a readjusted size of US\$ 40.49 million by 2032 with a CAGR of 13.7% during review period.

In 2025, global sales volume of Metal-coated Quartz Fiber Fabric is estimated at approximately 100,000 square meters, with a global average selling price of around USD 160 per square meter. The gross margin of major manufacturers is generally in the range of 30%-45%.

Metal-coated Quartz Fiber Fabric is a functional composite fabric made from high-purity quartz fiber fabric as the substrate and treated with metallic coatings such as copper, nickel or silver. The product combines the advantages of quartz fiber, including high temperature resistance, low dielectric constant, low thermal expansion, corrosion resistance and good flexibility, while also gaining electrical conductivity, electromagnetic shielding, heat reflection and antistatic properties through the metal coating. Compared with conventional metal foil, metal mesh or general conductive fabrics, Metal-coated Quartz Fiber Fabric is lighter in weight, more flexible and more resistant to high temperatures. It can conform to complex structures and maintain stable performance in high-temperature and strong electromagnetic interference environments, making it suitable for high-end applications such as aerospace, electronic communication, energy equipment, industrial equipment and transportation.

Its upstream supply chain mainly includes high-purity quartz fiber yarn, quartz fiber substrate fabric, copper salts, nickel salts, silver salts, surface activators, plating

additives and finishing materials. Downstream applications mainly include aerospace, electronic communication, energy equipment, industrial equipment and transportation. The product value is concentrated in the combined advantages of the high temperature resistance and low dielectric properties of quartz fiber substrate fabric, together with the electrical conductivity and shielding performance provided by the metal coating. It offers a strong balance among lightweight design, thermal protection, electromagnetic shielding and flexible protection.
