The global Metal Composite Wall Panel market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Metal composite wall panel is a type of architectural cladding system used in building construction. It consists of multiple layers of different materials bonded together to create a single panel. The composition typically involves a metal outer layer, a core material, and possibly additional layers for insulation or reinforcement. The metal outer layer of the panel is usually made of aluminum or steel. It provides durability, strength, and weather resistance. Aluminum is commonly used due to its lightweight nature, corrosion resistance, and ease of fabrication. Steel panels may be chosen for their added strength and impact resistance.
