Metal conductor paste is a thick film paste widely used in microelectronics technology. Its main components include metal conductive phase, binder, additives and organic carrier. According to the different conductive phases, it can be divided into two categories: precious metal conductor paste and base metal conductor paste. Precious metal conductor paste uses Ag, Au, Pd, Pt and other metals and their alloys as conductive phases, and has the characteristics of stable performance and mature technology. Base metal conductor paste mainly includes Cu, Al, Ni and other metal conductor pastes, which have more advantages in cost. Metal conductor paste has excellent conductivity, strong adhesion, good processability and high stability, and is widely used in electronics, electrical appliances, display devices and other fields.
