According to our (Global Info Research) latest study, the global Metal Cylinder Head Gasket market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A cylinder gasket is a mechanical seal between to mating surfaces. Its purpose is to prevent leakage of liquids or gasses flowing or contained within the assembled parts. The metal cylinder head gasket is a gasket composed of metal materials, such as multi-layer steel, copper, etc.

Every car, truck, light truck, forklifts and heavy duty machines now has head gasket but they vary in their construction thickness and based on the manufacturer design of the engine. Typically, a 6 or 8 cylinder engine is equipped with 2 cylinder head gasket. With quality head gasket, it helps to ensure maximum compression and prevent coolant or engine oil leakage into the cylinders. This help to ensure long lasting performance and maintaining the efficiency of an engine.
