## Abstracts

According to our (Global Info Research) latest study, the global Metal Degreasing Services market size was valued at US\$ 1699 million in 2025 and is forecast to a readjusted size of US\$ 2737 million by 2032 with a CAGR of 7.0% during review period.

Metal degreasing services typically refer to the industrial process of professionally removing oil, grease, particulate matter, and other contaminants from the surface of metal parts using specialized chemical agents (such as solvent-based or water-based degreasers) or physical methods. Driven by both stringent environmental regulations and the demand for industrial precision, this market is exhibiting a clear evolutionary pattern. On the one hand, core industries such as automotive and aerospace are continuously increasing their requirements for the precision and consistency of cleaning, driving services towards high-end and customized solutions. On the other hand, increasingly stringent environmental regulations globally (such as restrictions on volatile organic compounds, VOCs) are accelerating the reshuffling of the market landscape, prompting service providers to shift from traditional solvent-based products to more environmentally friendly water-based and bio-based degreasing solutions. Therefore, technological integration and improved service efficiency have become key factors in measuring the core competitiveness of professional metal degreasing service providers.
