Abstracts

The raw material of the metal desiccant is a kind of aluminum silicate with stable chemical performance, which is collected from natural minerals. At 25°C and a relative humidity of 80%, the maximum capacity of absorbing water vapor can exceed 200%, and the moisture absorption can reach more than 250 grams, which is 10-20 times the water absorption rate of ordinary silica gel, rather than chemical formation. In terms of cost and environmental protection, it has more advantages than silica gel, especially the export-oriented hardware products will have a period of storage and transportation after production and packaging. Anti-mildew effect, that is, anti-mildew and good moisture effect, the desiccant after absorbing moisture must not overflow, regurgitate, etc.
