The global Metal Drilling Machine market size is expected to reach \$ 39672 million by 2032, rising at a market growth of 6.5% CAGR during the forecast period (2026-2032).

In 2025, global metal drilling machine production reached approximately 1,582,000 units. A metal drilling machine is a type of machine tool used to create holes in metal workpieces, capable of performing various operations such as drilling, reaming, boring, and tapping. It removes material using a rotating drill bit to produce holes of different diameters, depths, and shapes. Metal drilling machines are widely used in mechanical manufacturing, mold processing, automotive industry, aerospace, and steel metallurgy. Depending on structure and application, they can be classified into bench drilling machines, vertical drilling machines, horizontal drilling machines, radial drilling machines, and CNC drilling machines, suitable for both small and medium-to-large workpieces requiring precise hole machining.

With the growing demand for high-precision machining, automated production, and multifunctional equipment in the manufacturing industry, the metal drilling machine market is experiencing steady development. The increasing need for drilling, reaming, boring, and tapping in sectors such as mechanical processing, mold manufacturing, automotive components, aerospace, and steel metallurgy has driven the widespread application of drilling machines. At the same time, with the adoption of CNC technology and smart manufacturing, traditional manual drilling machines are gradually being replaced by high-efficiency, CNC, and intelligent drilling machines, particularly in medium to large enterprises and precision manufacturing. The Asia-Pacific region, with its large manufacturing base and active industrial investment, has become the primary driver of market growth, while Europe and North America maintain steady demand for high-precision and highly reliable drilling equipment. In the coming years, with the

promotion of intelligent machining, green manufacturing, and high-capacity drilling machines, the metal drilling machine market is expected to continue its steady growth and trend toward automation, flexibility, and digitalization.
