Abstracts

According to our (Global Info Research) latest study, the global Metal Fiber Sintered Felt market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Metal sintered fiber felt has excellent filtration performance and is an ideal high temperature resistant, corrosion resistant, high precision filter material. Compared with other filter materials, metal fiber sintered felt can block colloids even at very high temperatures, because the fine metal wires have many contact points and thus have a strong blocking ability. This filter material is composed of at least two layers of metal felt, which can form a three-dimensional gradient filter, so this material has a high dirt-holding capacity. Conventional metal mesh is easy to be blocked and damaged, powder filter products are fragile and have low flow rate, and ordinary filter paper and filter cloth are not resistant to temperature and pressure. The characteristics of metal fiber sintered felt effectively make up for the shortcomings of the above products and are widely used.

This report is a detailed and comprehensive analysis for global Metal Fiber Sintered Felt market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
