Abstracts

The global Metal Fiber Sintered Felt market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Metal sintered fiber felt has excellent filtration performance and is an ideal high temperature resistant, corrosion resistant, high precision filter material. Compared with other filter materials, metal fiber sintered felt can block colloids even at very high temperatures, because the fine metal wires have many contact points and thus have a strong blocking ability. This filter material is composed of at least two layers of metal felt, which can form a three-dimensional gradient filter, so this material has a high dirt-holding capacity. Conventional metal mesh is easy to be blocked and damaged, powder filter products are fragile and have low flow rate, and ordinary filter paper and filter cloth are not resistant to temperature and pressure. The characteristics of metal fiber sintered felt effectively make up for the shortcomings of the above products and are widely used.

This report studies the global Metal Fiber Sintered Felt production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Metal Fiber Sintered Felt, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
