The metal frame activated carbon air filter is an efficient air purification device consisting of a metal frame, activated carbon filter material and sealing material. The metal frame provides support and protection for the activated carbon filter material and is usually made of stainless steel, aluminum alloy or galvanized steel. The metal frame needs to have sufficient strength and rigidity to withstand the weight of the activated carbon filter material and the pressure of the air flow. Activated carbon filter material is the core component of the metal frame activated carbon air filter and is made of activated carbon particles. Activated carbon has strong adsorption capacity and can absorb various pollutants in the air, including dust, pollen, PM2.5, volatile organic compounds (VOCs), odors, etc. The sealing material is used to seal the gap between the metal frame and the activated carbon filter material to prevent air leakage. The sealing material needs to have good sealing and weather resistance to ensure the airtightness of the filter.
