Metal glow plugs are known for their durability and longevity, capable of withstanding the harsh conditions and high temperatures inside the engine. They are commonly used in diesel engines for various applications, including automobiles, trucks, boats, agricultural machinery, and industrial equipment.

A metal glow plug is an electrical device used in internal combustion engines, particularly diesel engines, to aid in cold starting. It consists of a heating element made of a metal alloy, usually a nickel-chromium alloy, and is designed to generate heat when an electrical current passes through it. The metal glow plug is installed in the combustion chamber of the engine, where it ignites the fuel-air mixture by heating the air inside the cylinder.
